Projects:-

• Buy & Sell

Developed a comprehensive e-commerce website, "Buy&Sell," designed to facilitate a multi-merchant marketplace experience. This robust system enables:

- Customer-Centric Features: Users can browse a diverse product catalog from multiple merchants, manage shopping carts, place orders, track order status (including cancellation options before delivery), and submit product reviews.
- Merchant Management Tools: Merchants are equipped with a dedicated portal to register, list products, receive real-time new order notifications, view detailed customer order information (delivery address, contact, name), update order statuses, and track completed orders as well.
- User Profile Management: Implemented functionality for users to view and update their personal profile details, enhancing user experience and data management.

This project focused on creating a seamless and efficient online marketplace, enhancing both the customer shopping journey and merchant operational capabilities.

• Skills: HTML, CSS, Express.js, Bootstrap, EJS templates, layouts, MongoDB.

• Library Management System

Developed a desktop-based Library Management System using Java Swing for the front-end and PostgreSQL for back-end data storage. This application provides comprehensive functionalities for library administration, including:

- Book Management: Facilitates the issuance and return of books to and from students.
- Centralized Control: Offers full administrative control over library operations, ensuring efficient management of all book resources.

This project demonstrates proficiency in desktop application development, database integration, and the creation of user-friendly interfaces for administrative tasks.

• Skills: Java AWT, Swing, Postgresql
